

MICROVISION

Change 6 — Out-of-Warranty Money Flow, Editable Billing & Engineer Name Field

v2.0 — No new flows. All within existing complaint lifecycle.

Change 6A — Out-of-Warranty Money Flow

Core principle: Customer pays ALL costs in out-of-warranty complaints — preset, petrol, extras, parts. Customer pays Microvison (company). Microvison pays SC. If customer paid SC directly at any point, that amount is subtracted from what Microvison owes SC.

6A.1 The Multi-Stage Payment Problem

Out-of-warranty complaints often span multiple stages — initial visit, part pending, part delivery, re-visit. Customer payments can happen at any of these stages, not just once at the end. The system must track every payment at every stage so the final net billing to SC is accurate.

- Stage 1: Complaint registration — admin tells customer estimated cost on call. Customer may pay upfront.
- Stage 2: After SC visits and submits Done/Not Done/Part Pending form — admin knows actual scope, may collect more or record what SC collected.
- Stage 3: Part pending — admin quotes part cost. Customer pays for the part.
- Stage 4: Part delivered, SC visits again, marks Done — final collection if any balance remaining.

Not all stages happen in every complaint. Simple complaints may have only 1-2 payment events. Complex part-pending complaints may have 3-4.

6A.2 Admin-Only ‘Collected from Customer’ Section

At each stage of the complaint, admin sees a collapsible ‘Collected from Customer’ section in the admin complaint panel. This section is:

- Visible to admin only — SC never sees this section
- Available at every stage: complaint registration, after each SC form submission (Done/Not Done/Part Pending), after part delivery
- Each entry is independent — multiple entries can be added across stages

Each collection entry has these fields:

Field	Type	Details
Amount	Number (rupees)	How much customer paid at this stage
Payment route	Select — 2 options	Paid to Microvison (company received it) OR Paid to SC directly (SC received it)
Stage / reason	Free text	What this payment was for: initial estimate, part cost, final balance, etc.
Date recorded	Auto	Timestamp when admin added this entry

Admin fills this after receiving info on call from SC or customer. The system has no way to auto-detect payments — admin manually records every payment event.

6A.3 Effect on SC Billing

Payment Route Selected	Effect on SC Bill	Visible to SC?
Paid to Microvison	No effect on SC bill. Recorded internally for Microvison's accounts only. Microvison pays SC normally from this collected money.	No — admin only
Paid to SC directly	Amount SUBTRACTED from what Microvison owes SC for this complaint. SC already has this money — Microvison does not pay it again.	Yes — shown on SC billing as '₹X — Customer payment collected by SC: [reason]'

If multiple 'Paid to SC directly' entries exist across stages, all are summed and the total is subtracted from SC's final bill.

6A.4 What Microvison Pays SC — Net Calculation

Shown in the pre-close billing summary panel (see Change 6B):

Line Item	Direction
Preset price (editable — see 6B)	Microvison → SC
Petrol final (3-lock system)	Microvison → SC
Approved extra charges	Microvison → SC
Microvison-approved part/extra (if any)	Microvison → SC
MINUS: All 'Paid to SC directly' entries across all stages	Subtracted from SC bill
= Net amount Microvison pays SC	Final SC payment
Separately tracked: All 'Paid to Microvison' entries	Internal record only — not in SC bill

Change 6B — Reopen Abandoned + All Money Fields Editable Before Closing

Reopen is completely removed. No reopen button, no reopen detection, no reopenParentId, no special status. Every complaint is a new complaint with a new ID. Admin handles repeat-visit billing by editing the preset price down with a reason. Product timeline still shows full history for admin context.

6B.1 What Gets Removed

- Reopen button — removed from everywhere
- Reopen detection on phone entry in Step 1 — removed
- reopenParentId field — removed from Complaint model
- isReopened flag — removed
- reopenNotes, reopenPhotos fields — removed
- Reopen status in status lifecycle — removed
- Reopen WhatsApp trigger (WA-05 reopen variant) — removed
- Reopen filter in All Complaints filters — removed

Product timeline is NOT removed. Admin still sees full complaint history for a product (all previous complaints, dates, statuses) from the product timeline section in complaint detail view. This gives admin full context when deciding how much to pay SC for a repeat visit.

6B.2 How Repeat Visits Are Handled Now

Same product complained again within 30 days:

- Admin registers a new complaint — full normal flow, new complaint ID
- Admin sees product timeline showing previous complaint(s) and their dates
- Admin decides: should SC be paid less since it's a repeat visit?
- If yes — admin edits the preset price down with a reason before closing (see 6B.3)
- If no — admin closes with full preset price. Nothing special needed.
- No system enforcement. Admin uses judgment. Simple.

6B.3 Editable Money Fields — Both Warranty Types

All money fields are editable by admin before closing. Applies equally to in-warranty and out-of-warranty complaints.

Field	Editable Before Closing?	Warning?	Reason Required?
Preset price (rupee amount only — preset selection unchanged)	Yes	Yes — always fires	Yes — mandatory

Field	Editable Before Closing?	Warning?	Reason Required?
Petrol (via 3-lock system — unchanged)	Yes — admin edit 1 and 3 only	Edit count shown	No
Approved extra charge amounts	Yes	Yes	Yes — mandatory
Customer payment entries (amount + route)	Yes — each entry editable	Yes	Yes — mandatory
Microvison-approved extras	Yes	Yes	No

Preset price edit — exact behaviour

- Admin clicks Edit on preset price — warning fires: ‘You are changing the preset price for this complaint. This affects the final bill.’
- Admin enters new amount + mandatory reason (e.g. ‘Repeat visit within 30 days — reduced fee’, ‘Partial work only’, ‘Goodwill discount’)
- Original preset price + edited price + reason + timestamp all stored for audit
- Which preset was selected does NOT change — only the rupee amount for this complaint

6B.4 Pre-Close Billing Summary Panel

Before admin clicks Confirm Done, a full money summary panel is shown. All fields editable from here directly:

Section	What Admin Sees
Microvison pays SC	Preset (₹X → edited ₹Y if changed) + Petrol + Extras + Microvison parts – Customer payments to SC = Net total SC payment
Customer payments (internal)	All ‘Paid to Microvison’ entries listed with stage and date. Total collected by company. Not in SC bill.
Customer payments (SC deductions)	All ‘Paid to SC directly’ entries listed with stage and date. Total subtracted from SC bill.
Edit buttons	Each line item has inline Edit. Admin adjusts without leaving this panel.
Modified fields warning	Yellow banner if any field changed from original: ‘X fields modified. Review before closing.’
Confirm Done button	Locks all fields permanently. Bill generated. Cannot be undone.

Change 6C — Engineer Name Field

Property	Details
Field name	engineerName
Type	Free text, optional
Scope	Complaint-specific. Not stored on Product record or SC record.
Filled by SC	Optional field in Done form — ‘Engineer who visited the customer’
Filled/edited by admin	Admin can fill or edit at any time before closing
Visible to	Both admin and SC in complaint detail view. Shown in billing breakdown as a reference field.
On WhatsApp	Not included in any WhatsApp message

Complaint-specific because different engineers from the same SC may handle different visits for the same product. Storing per-complaint allows tracking which engineer handled which visit for accountability.

Data Model Changes

New fields on Complaint model

Field	Type	Notes
customerPayments	Array of objects	[[{amount, route (to_microvison / to_sc), reason, stage, recordedAt, recordedBy}]]. One entry per payment event across all stages.
presetPriceOriginal	Number	Snapshoted at complaint creation. Never changes.
presetPriceFinal	Number	Admin-editable before closing. Starts equal to presetPriceOriginal. If edited, reason stored.
presetPriceEditReason	String	Required if presetPriceFinal differs from presetPriceOriginal.
presetPriceEditedAt	Date	Timestamp of edit.
engineerName	String	Optional. Who visited the customer.

Fields removed from Complaint model (reopen cleanup)

Field Removed	Reason
isReopened	Reopen concept abandoned
reopenParentId	Reopen concept abandoned
reopenNotes	Reopen concept abandoned
reopenPhotos	Reopen concept abandoned
reopenedAt	Reopen concept abandoned

Summary

Change	What It Does
6A — Out-of-warranty money flow	Admin records customer payments at each complaint stage (registration, Done, Not Done, Part Pending, part delivery). Each payment: amount + Paid to Microvison OR Paid to SC. Paid to SC entries are summed and subtracted from SC billing. Paid to Microvison entries are internal records only. SC sees deductions on their billing page with label and reason.
6B — Reopen removed + editable billing	Reopen completely abandoned — all reopen fields, buttons, detection, filters removed. Repeat complaints are new complaints. Admin edits preset price (amount only, not selection) with reason to handle repeat-visit billing. All money fields editable before closing with warning. Pre-close summary panel shows full net billing.
6C — Engineer name	Optional free text field per complaint. SC fills in Done form. Admin can edit before closing. Shown in complaint detail and billing for both roles.
