

MICROVISION

Change 6 — Out-of-Warranty Money Flow, Editable Billing & Engineer Name Field

Three self-contained changes. No new flows created. Everything works within the existing complaint lifecycle.

Change 6A — Out-of-Warranty Money Flow

This clarifies exactly how money moves in out-of-warranty complaints. No new system is created — the existing customer payment fields and billing system handle everything. This is a documented understanding of how admin uses those fields.

Core principle: In out-of-warranty complaints, the customer bears ALL costs. Microvison's only payment to SC is for Microvison-approved extras (e.g. a branded part Microvison sourced and sent). Everything else is customer-funded.

6A.1 What the Customer Pays

- Preset service charge (the base service fee — customer is told this upfront on the initial call before SC is dispatched)
- Petrol / travel charges
- Extra charges (standard extras approved during the complaint)
- Part cost (if part pending — customer pays for the part being ordered/delivered)

Admin informs customer of the estimated total on the initial call. Customer must agree before SC is dispatched. If customer does not agree, complaint is not proceeded with.

6A.2 How Customer Can Pay — Two Routes

Payment Route	What Happens	Effect on SC Billing
Paid directly to Microvison	Customer transfers money to Microvison (online, bank, UPI). Microvison receives it. Microvison pays SC their portion from this collected amount.	SC billing is normal. Microvison pays SC from collected customer money.
Paid directly to SC	Customer hands cash or pays UPI directly to the SC in person. SC already has the money.	That amount is SUBTRACTED from what Microvison owes SC. SC already collected it. No double payment.

Payment can happen at multiple points in the complaint lifecycle — upfront (initial estimate), mid-visit (if extra charges discovered), after part delivery. Each payment event is recorded separately by admin in the complaint.

6A.3 What Microvison Pays SC in Out-of-Warranty

Component	Who Funds It	Notes
Preset service charge	Customer funds it	Customer paid this. Microvison passes it to SC (or subtracts if SC already collected).
Petrol / travel	Customer funds it	Same — customer paid. Flows to SC.

Component	Who Funds It	Notes
Standard extra charges	Customer funds it	Same flow.
Microvison-approved extras	Microvison funds it	Optional. Only when Microvison itself sourced a branded part or contributed something specific. Rare.
Part cost (part pending)	Customer funds it	Customer pays for the part. If paid to SC directly — subtracted. If paid to Microvison — Microvison pays SC.

6A.4 Net Billing Calculation

Admin sees this before closing (editable — see Change 6B):

Line Item	Amount
Preset price (as set for this complaint)	₹X
Petrol (final after 3-lock)	₹X
Approved extra charges	₹X
Microvison-approved extras (if any)	₹X
MINUS: Customer payments collected by SC directly	–₹X
= Net amount Microvison pays SC	₹X (bold total)
For record: Customer payments to Microvison directly	₹X (separate line, not in SC bill)

Change 6B — Reopen Flow Abandoned + All Money Fields Editable Before Closing

Reopen is completely removed from the system. No reopen button. No reopen detection. No reopenParentId. No special status. A repeat complaint for the same product within 30 days is simply a new complaint with a new complaint ID. Admin handles billing adjustments manually using editable fields.

6B.1 What “Reopen” Was and Why It’s Gone

- Previously: if same product complained again within 30 days, a special reopen flow triggered with linked IDs and separate billing logic.
- Problem: too complex, too many edge cases, and admin already has all the tools needed to handle it manually.
- Solution: every complaint is a new complaint. Admin simply edits the preset price down (with reason) if they want to pay SC less for a repeat visit. Nothing else changes.
- Product timeline still shows full history — admin can see this product had a complaint 10 days ago. Admin uses that context to decide how much to pay SC. System doesn’t enforce anything.

6B.2 Editable Money Fields Before Closing — Both Warranty Types

Before admin clicks Confirm Done to close a complaint, ALL money fields are editable. This applies to in-warranty AND out-of-warranty complaints equally.

Field	Editable?	Warning on Edit?	Reason Required?	Who Can Edit
Preset price (rupee amount for this complaint only)	Yes — before closing	Yes — always	Yes — mandatory	Admin only
Petrol amount	Yes — via 3-lock system (unchanged)	Shown as edit count	No (edit count is the control)	Admin (edit 1 and 3), SC (edit 2)
Extra charge amounts (approved)	Yes — before closing	Yes — always	Yes — mandatory	Admin only
Customer payment amount (paid to SC)	Yes — before closing	Yes — always	Yes — mandatory	Admin only
Customer payment amount (paid to Microvison)	Yes — before closing	Yes — always	Yes — mandatory	Admin only
Microvison-approved extras	Yes — before closing	Yes — always	No	Admin only

6B.3 Preset Price Edit — How It Works

- The preset itself (which preset was selected) does NOT change. Only the rupee amount for this specific complaint is editable.
- Admin clicks Edit on the preset price field — a warning fires: 'You are changing the preset price for this complaint. This will affect the final bill. Please provide a reason.'
- Admin enters new amount + reason (free text, mandatory). Examples of valid reasons: 'Repeat visit within 30 days — reduced fee', 'Partial work done', 'Customer goodwill discount'.
- Original preset price and edited price are both stored. Edit reason stored. Audit trail maintained.
- This is how admin handles what used to be called 'reopen billing' — just lower the preset price with a reason. Simple.

This is the ONLY change to preset handling. The preset library, preset selection at complaint registration, and preset price snapshotting all work exactly as before. Only the final amount is overrideable before closing.

6B.4 Pre-Close Money Summary Panel

Before admin clicks Confirm Done, a full money summary panel is shown showing all editable fields in one place:

Section	Shows
What Microvison pays SC	Preset price (original → edited if changed) + Petrol final + Approved extras + Microvison extras – Customer payments collected by SC = Net total
What customer paid / owes	Customer payments to Microvison (recorded) + Customer payments to SC (recorded) + Any outstanding balance
Edit buttons	Each line item has an Edit button. Admin can adjust any field from this panel without going back to individual sections.
Warning banner	If any field was edited from its original value: yellow banner shows 'X fields have been modified from original values. Review before closing.'
Confirm close button	Only enabled after admin has reviewed. Clicking locks all fields permanently.

Change 6C — Engineer Name Field

A new optional field is added to complaints: Engineer Name. This records which engineer/technician actually went to the customer's location.

6C.1 Field Details

Property	Value
Field name	engineerName
Type	Free text string
Required	No — optional
Scope	Complaint-specific (not stored on Product record or SC record)
Who fills it	SC fills at time of submitting Done form. Admin can also fill or edit it at any time before closing.
Where shown	Complaint detail view (both admin and SC can see it). Billing breakdown (shown alongside complaint ID and SC name). Not shown on WhatsApp messages.

6C.2 Why Complaint-Specific

- Different engineers from the same SC may handle different visits for the same product over time.
- Storing it on complaint level means you can track which engineer handled which specific visit — useful for accountability and quality tracking.
- SC may have multiple engineers — they fill whoever actually went. Admin can verify or correct before closing.

6C.3 Where It Appears in the Flow

Point in Flow	Action
SC Done form	Optional field: 'Engineer Name (who visited the customer)'. SC fills their engineer's name.
Admin review before closing	Admin sees the engineer name. Can edit if SC filled it wrong or left it blank.
Complaint detail view	Shown in the complaint info section alongside SC name, complaint ID, date.
Billing breakdown	Shown as a reference field: 'Engineer: [Name]' next to the complaint line item.

Summary — Change 6 Overview

Change	What It Does	New Flow Created?
6A — Out-of-warranty money flow	Customer pays all costs. Two payment routes: to Microvison or to SC directly. SC gets paid from customer money (net of what SC already collected). Microvison only pays SC for Microvison-approved extras from its own pocket.	No — uses existing customer payment fields
6B — Reopen abandoned + editable billing	Reopen concept completely removed. Every complaint is new. Preset price (amount only) editable before closing with reason + warning. All other money fields editable with warning. Pre-close summary panel shows full net billing for review.	No — edits to existing billing UI only
6C — Engineer name field	Optional free text field on each complaint. SC fills at Done time. Admin can edit before closing. Complaint-specific, not stored on Product or SC records.	No — single new optional field
